Addition is an important skill students need to practice to improve their math fluency. Sometimes individuals with ASD can be overwhelmed by a page of blank math problems and do not show what they know. This addition flipbook gives a different format for students to show their knowledge by breaking the work down into smaller and more manageable chunks.

### Materials Needed:

- Marker or pencil
- Activity (p.2-7)
- Optional:**
  - Scissors
  - Binder or rings
  - Hole punch
  - Laminator
  - Calculator

### Directions:

1. Print out pages 2-5. Cut out the squares with math problems.
2. (Optional) Laminate the squares for durability.
3. (Optional) Punch a hole in the problem cards and collect together on a ring, placing the "Finished" card at the end.
4. Use Reward schedule if needed. *For additional information, see Reward Schedules How-To Template.*

Materials provided are **samples only!**  
They may need to be individualized to meet the particular needs of a person with ASD!

## Addition

Find the answer to each addition problem. Use a calculator if needed.

Keep working until you see a Finished sign.
